The present invention relates to the isolation of a growth factor concoling it. The zvegf3 polypeptide is useful for stimulating the encoding it. The zvegf3 polypeptide is useful for stimulating the encoding it. The zvegf3 polypeptide is useful as a prof apha receptor agonist and cell-surface platelet-derived growth factor (PDGF) alpha receptor. The zvegf3 polypeptide is useful as a PDGF alpha receptor agonist and cell-surface platelet-derived growth factor (PDGF) alpha receptor. The zvegf3 polypeptide is useful as a PDGF alpha receptor agonist and certain full-thickness skin wounds, female certain full-thickness skin wounds, female certain in tissue adhesives for promoting the sam additive in tissue adhesives for promoting cuseful as an additive in tissue adhesives for promoting cuseful as an additive in tissue adhesives for promoting cuseful certical hepaticis, hepatic chronic passive congestion disease, chronic active hepatitis, hepatic chronic passive congestion (CPC), central haemorrhagic necrosis (CHN), hepatic vein thrombosis, cordiac sclerosis, and many types of cirrhosis. CC portal vein thrombosis, cardiac sclerosis, and many types of cirrhosis. CC conduction in areas requiring neovascularisation and mobilisation of endothelial precursor stem cells, creating and stabilising new vessel conduction in areas requiring neovascularisation, including areas of cirrhosis. CC cord and sensory neurite outgrowth, and as part of therapeutic creament for the regeneration of neurite outgrowths following strokes, cord and sensory neurite outgrowth, and as part of therapeutic creament for the regeneration of neurite outgrowths following strokes, coliseases (e.g. multiple sclerosis, Alzheimer's disease, Parkinson's disease), diabetic retinopathy, psoriasis, arthritis, scleroderma, and cirrhosis, and glomerulosclerosis. An antibody that binds reading fibrosis, and glomerulosclerosis. An antibody that binds arthritis, influenced to require the profession of the patelon of arthritis, and for treating proliferative valessab
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  122 CGGGCTGGGCCTTGGAGTCGTCGCTTCCCCAGTGCCCGCGAGTGAGCCCTCG 181

An antisense molecule of the invention is useful for treating or preventing cancer, rheumatoid arthritish; psoriasis and diabetic retinopathy by inhibiting angiogenic activity or inappropriate vascularization including formation and proliferation of new blood vessels, growth and development of tissues, tissue regeneration and organ and tissue repair in a subject. The products of the invention are useful for preparing medicaments for treating wounds such as dermal ulcers, pressure sores, venous sores, diabetic ulcers and burns and to promote
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New vascular endothelial growth factor protein, useful for treating or preventing diseases associated with inappropriate angiogenesis activity such as cancer, rheumatoid arthritis, psoriasis and wounds -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present sequence is the CDNA sequence of human vascular endothelial growth factor-X (VEGF-X), or platelet-derived growth factor-C (PDGF-C), a novel member of the VEGF/POGF family. The cator-C (PDGF-C), a novel member of the VEGF/POGF family. The cDNA was obtained from a search of expressed sequence tag databases. Positions of mRNA splicing events were determined either from direct sequencing on an isolated BAC clone or by comparison of partial BAC database sequences. No information on splicing events is available for the region from nucleotides you to 957. Cryptic splice donor/acceptor sites were deduced from variant sequences isolated by PCR. The VEGF-X gene was localised to the long arm of human chromosome 4, region q1-q32. The VEGF-X protein, and its CUB domain, exhibit a mitogenic activity on human smooth muscle cell. Claimed methods of treating or preventing a urethral dysfunction, bladder dysfunction, pelvic floor reconstruction, sphincter dysfunction or a dysfunction associated with aberrant endogenous VEGF-X activity comprise administering a conceing it, an expression vector comprising the nucleic acid molecule or apharmaceutical composition comprising the nucleic acid molecule or apharmaceutical composition comprising the nucleic acid molecule or polypeptide. Claimed methods of treating or preventing atherosclerosis, neointimal hyperplasis caused by artery anastomosis or balloon catheter, post-angioplasty regrenosis cornary anastomosis or balloon catheter, post-angioplasty regrenosis and planed with smooth muscle cell proliferation, and condition, as susceptibility to such a condition, associated with smooth muscle cell proliferation, are also claimed.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CCCTGCGATTCTCTGCTGCCAGAGCCGCCAGGCGCTTCCACCGCAGCGCAGCCTTTCCC

New vascular endothelial growth factor protein, useful for treating or preventing diseases associated with inappropriate angiogenesis activity such as cancer, rheumatoid arthritis, psoriasis and wounds -Disclosure, Fig 30B; 127pp; English

This invention describes a novel vascular endothelial growth factor-X (VEGF-X) protein (Ia) and its encoding polynucleotide (IIa) which has vulnerary cytostatic, antirheumatic, antiantitic, antipsoriatic and antidiabetic activity and acts as an anglogenesis and vascularization regulator. An antisense molecule of the invention is useful for treating or preventing cancer, rheumatoid arthritis, psoriasis and diabetic ethinopathy by inhibiting angiogenic activity or inappropriate vascularization including formation and proliferation of new blood vessels, growth and development of tissues, tissue regeneration and organ and tissue repair in a subject. The products of the invention are useful for preparing medicaments for treating wounds such as dermal ulcars, pressure sores, venous sores, diabetic ulcars and burns and to promote skin graft growth, tissue repair, proliferation of new blood vessels, tissue regeneration and organ repair by promoting angiogenic activity or vascularization. This sequence encodes a human VEGF-X protein described in the method of the invention.

This invention describes the isolation of a novel human vascular endothelial cell growth factor-E (VEGF-E) polypeptide which has cranginalizer, vulnery and cardiant activity. VEGF-E can be administered the tranquillizer, vulnery and cardiant activity. VEGF-E can be administered the amount of the superior in mammals, especially by expressing encoding polynucleotides, to treat cardiavascular or endothelial disorders in mammals, especially cangeneration, and may especially be used to treat cardiac hypertrophy can be combined with a carrier in pharmaceutical compositions, which can be combined with a carrier in pharmaceutical compositions, which can be combined with a carrier in pharmaceutical compositions, which care angiogenic disorders in mammals (especially humans) e.g. cancer or serven for antagonists and agonists, and the antagonists administered to treat angiogenic disorders in mammals (e.g. useful therapeutically as antagonists, as above. The antibodies are also useful therapeutically as antagonists, as above and the antibodies are also cardiovascular, endothelial or angiogenic disorders in mammals (e.g. vaccular disease, or neovascularization associated with tumor formation) by contacting the antibody with a tissue sample and detecting formation of an antibody-VEGF-E polypeptide complex. Polymorleotides encoding UEGF-E can be used to diagnose cardiovascular and endothelial disease or in mammals, by detecting abnormally high or low VEGF-E gene expression in the succession in th

in wound repair, as well as in the generation and regeneration of tissue. The sequences of the invention are useful for diagnosing or treating cardiovascular, endothelial or angiogenic disorders such as cancer, diabetes mellitus, cardiac hypertrophy and atherosclerosis. The polymucleotide encoding VEGP-E is useful in the gene therapy of such disorders. The present sequence encodes human VEGF-E.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention relates to the isolation of human vascular endothelial cell growth factor-E (VEGF-E, also referred to as PRO:200), and the polynucleotide sequence encoding it. VEGF-E is related to VEGF and bone morphogenetic protein 1. VEGF-E is useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Location/Qualifiers

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          209
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                177
Nucleic acids encoding TANGO polypeptides are useful as modulating agents for regulating cellular processes like asthma, graft versus-host diseases, thematoid arthritis, psoriasis, inflammatory bowel disease, septic shock, ulcerative colitis, Crohn's disease, chronic myelogenous leukemia, cancer, liver disease, Hodgkin's disease, osteoarthritis, Lyme's disease, cachexia and autoimune clisease e.g. myasthemia gravis, autoimmune diabetes and systemic ulpus erythematosus. The nucleic acids are also useful for producing transgenic animals and the TANGO polypeptides themselves. Partial TANGO-128, 140, 197, 212, 213, 239 sequences are useful in forensic biology, for diagnostic assays, prognostic assays, playmentides are suitable for monitoring clinical trials. TANGO plypeptides are suitable for both prophylactic and therapeutic methods for treating a subject at risk of a disorder or having a disorder associated with aberrant TANGO expression. A wide range
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                61
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  GIGTIGCCCCTTCATCTTTGTCATTGGACCTGCTCAACAATGCTGTGACTGCCTTCAGT

invention

The present invention describes secreted and transmembrane polypeptides and their polynucleotides. The nucleotide sequences are useful as sources of probes, primers, for chromosome mapping, and for generation of antisense sequences. They can also be used to create transgenic animals. The proteins can be used to treat a variety of diseases and disorders, depending on their function. Diseases that may be treated include blood coagulation disorders, cancers and cellular adhesion disorders. They may also be used to raise antibodies. AAZ33891 to AAZ34338, and AAY41685 to AAY41774 represent polynucleotide and polypeptide sequence given in the exemplification of the present

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
